**KAMICO® Instructional Media, Inc.**  
**STAAR CONNECTION™**  
**Introduction**

KAMICO® Instructional Media's program is validated by scientifically based research. **STAAR CONNECTION™ Diagnostic Series™** and **Developmental Series™** can be used in tandem to ensure mastery of Texas reporting categories and TEKS. The *Diagnostic Series™* consists of a bank of assessments. Each assessment covers a mixture of reporting categories and TEKS. This research-based format provides continual reinforcement for and ensures retention of mastered concepts. To take full advantage of this series, administer an assessment to students. After they have completed the assessment, use it as an instructional tool. Go over each item with the class, discussing all correct and incorrect answers. Then, use the assessment as a diagnostic tool to determine a standard for which students need remediation. Find that standard in the *Developmental Series™*.

Each book in the *STAAR CONNECTION Developmental Series™* consists of isolated activities and assessments to allow for the development of specific TEKS. For every TEKS, there is at least one individual or group activity. The activities provide a fun, challenging, yet nonthreatening, way to develop mastery of the TEKS. In addition to these activities, each *Developmental Series™* book has assessments on isolated standards to be used to identify mastery or the need for further skill development or reinforcement. Continue to alternate between the *STAAR CONNECTION™ Diagnostic Series™* and the *Developmental Series™*.

KAMICO's **DATA CONNECTION®** software prints student answer sheets on plain paper using a standard laser printer, scans answer sheets using a TWAIN-compliant scanner, scores assessments, and disaggregates student academic data, showing which goals and objectives are mastered and which goals and objectives are in need of reinforcement. The software is preprogrammed to work with all KAMICO® assessments. It is easily customized to work with other instructional materials and assessments as well as teacher-, school-, district-, or state-created assessments. **DATA CONNECTION®** analyzes academic data from individual students, classes, grade levels, and demographic groups. Reports are presented in tabular and graphic form. Item analysis is provided to help determine the most effective method of instruction.

KAMICO® Instructional Media, Inc., supports efforts to ensure adequate yearly progress and eliminate surprises in high-stakes test results.

**Grade 4 Mathematics**  
**Reporting Categories and Related TEKS**

**Reporting Category 1:**  
**Numerical Representations and Relationships**

**The student will demonstrate an understanding of how to represent and manipulate numbers and expressions.**

		TE	SE
(4.2) Number and operations. The student applies mathematical process standards to represent, compare, and order whole numbers and decimals and understand relationships related to place value. The student is expected to			
(A) interpret the value of each place-value position as 10 times the position to the right and as one-tenth of the value of the place to its left; <b><i>Supporting Standard</i></b>	Values of Place Value . . . . .	13	5
	Assessment . . . . .	23	21
(B) represent the value of the digit in whole numbers through 1,000,000,000 and decimals to the hundredths using expanded notation and numerals; <b><i>Readiness Standard</i></b>	Match Those Numbers! . . . . .	28	28
	Assessment . . . . .	54	26
(C) compare and order whole numbers to 1,000,000,000 and represent comparisons using the symbols $>$ , $<$ , or $=$ ; <b><i>Supporting Standard</i></b>	Comparison Face-Off . . . . .	57	29
	Assessment . . . . .	61	38
(D) round whole numbers to a given place value through the hundred thousands place; <b><i>Supporting Standard</i></b>	Rounding Cups . . . . .	67	44
	Assessment . . . . .	71	45
(E) represent decimals, including tenths and hundredths, using concrete and visual models and money; <b><i>Supporting Standard</i></b>	Deriving Decimals . . . . .	75	49
	I Have/Who Has . . . . .	81	
	Assessment . . . . .	91	50
(F) compare and order decimals using concrete and visual models to the hundredths; <b><i>Supporting Standard</i></b>	Fun Fact Comparisons . . . . .	96	
	Marathon Mice . . . . .	98	56
	Assessment . . . . .	121	58

		<b>TE</b>	<b>SE</b>
(G) relate decimals to fractions that name tenths and hundredths; <b><i>Readiness Standard</i></b>			
	Fractions and Decimals . . . . .	127	64
	Assessment . . . . .	134	65
(H) determine the corresponding decimal to the tenths or hundredths place of a specified point on a number line. <b><i>Supporting Standard</i></b>			
	Points in Space . . . . .	138	69
	Assessment . . . . .	147	
(4.3) <b>Number and operations.</b> The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to			
(A) represent a fraction $a/b$ as a sum of fractions $1/b$ , where $a$ and $b$ are whole numbers and $b > 0$ , including when $a > b$ ; <b><i>Supporting Standard</i></b>			
	Fruit Fractions . . . . .	151	73
	Assessment . . . . .	155	85
(B) decompose a fraction in more than one way into a sum of fractions with the same denominator using concrete and pictorial models and recording results with symbolic representations; <b><i>Supporting Standard</i></b>			
	Decomposing Fractions . . . . .	159	89
	Assessment . . . . .	163	99
(C) determine if two given fractions are equivalent using a variety of methods; <b><i>Supporting Standard</i></b>			
	Equivalent Fractions . . . . .	169	105
	Assessment . . . . .	183	107
(D) compare two fractions with different numerators and different denominators and represent the comparison using the symbols $>$ , $=$ , or $<$ ; <b><i>Readiness Standard</i></b>			
	Fraction Fever . . . . .	189	
	Fraction Inspection . . . . .	198	113
	Assessment . . . . .	217	115
(G) represent fractions and decimals to the tenths or hundredths as distances from zero on a number line. <b><i>Supporting Standard</i></b>			
	Point the Way! . . . . .	222	
	Match Point . . . . .	224	120
	Assessment . . . . .	226	123

**Reporting Category 2:**  
**Computations and Algebraic Relationships**

The student will demonstrate an understanding of how to perform operations and represent algebraic relationships.

	TE	SE
(4.3) <b>Number and operations.</b> The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to		
(E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations; <b><i>Readiness Standard</i></b>		
Denominator Dominoes . . . . .	231	128
Assessment . . . . .	237	130
(F) evaluate the reasonableness of sums and differences of fractions using benchmark fractions 0, $\frac{1}{4}$ , $\frac{1}{2}$ , $\frac{3}{4}$ , and 1, referring to the same whole. <b><i>Supporting Standard</i></b>		
Benchmark Fractions . . . . .	243	136
Assessment . . . . .	245	140
(4.4) <b>Number and operations.</b> The student applies mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to		
(A) add and subtract whole numbers and decimals to the hundredths place using the standard algorithm; <b><i>Readiness Standard</i></b>		
Adding and Subtracting Across Texas .	251	146
Assessment . . . . .	259	148
(B) determine products of a number and 10 or 100 using properties of operations and place value understandings; <b><i>Supporting Standard</i></b>		
Shifting Sands . . . . .	262	151
Assessment . . . . .	272	
(C) represent the product of 2 two-digit numbers using arrays, area models, or equations, including perfect squares through 15 by 15; <b><i>Supporting Standard</i></b>		
Multi-Match . . . . .	275	
Assessment . . . . .	293	154

		TE	SE
(D)	use strategies and algorithms, including the standard algorithm, to multiply up to a four-digit number by a one-digit number and to multiply a two-digit number by a two-digit number. Strategies may include mental math, partial products, and the commutative, associative, and distributive properties; <b><i>Supporting Standard</i></b>		
	Major League Multiplication Methods . . . . .	299	160
	Assessment . . . . .	316	169
(E)	represent the quotient of up to a four-digit whole number divided by a one-digit whole number using arrays, area models, or equations; <b><i>Supporting Standard</i></b>		
	Quotient Touchdown . . . . .	320	173
	Assessment . . . . .	335	
(F)	use strategies and algorithms, including the standard algorithm, to divide up to a four-digit dividend by a one-digit divisor; <b><i>Supporting Standard</i></b>		
	Quotient Connection . . . . .	341	179
	Assessment . . . . .	346	181
(G)	round to the nearest 10, 100, or 1,000 or use compatible numbers to estimate solutions involving whole numbers; <b><i>Supporting Standard</i></b>		
	Estimation Sensation . . . . .	349	184
	Round and Round and Round We Go (multiplication and division) . . . . .	357	
	(addition, subtraction, multiplication, and division) . . . . .	358	187
	Assessment . . . . .	369	188
(H)	solve with fluency one- and two-step problems involving multiplication and division, including interpreting remainders. <b><i>Readiness Standard</i></b>		
	Playground Path . . . . .	372	192
	Assessment . . . . .	383	194
(4.5)	<b>Algebraic reasoning.</b> The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to		
(A)	represent multi-step problems involving the four operations with whole numbers using strip diagrams and equations with a letter standing for the unknown quantity; <b><i>Readiness Standard</i></b>		
	Wood Ya? . . . . .	386	197
	Assessment . . . . .	389	201

<p>(B) represent problems using an input-output table and numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence. <b><i>Readiness Standard</i></b></p> <p style="text-align: right;">Table Time . . . . . 394 You Can Count on It . . . . . 396 Assessment . . . . . 406</p>	<b>TE</b>	<b>SE</b>
<b>Reporting Category 3:</b> <b>Geometry and Measurement</b>		
<p><b>The student will demonstrate an understanding of how to represent and apply geometry and measurement concepts.</b></p>		
<p>(4.5) <b>Algebraic reasoning.</b> The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to</p> <p>(D) solve problems related to perimeter and area of rectangles where dimensions are whole numbers. <b><i>Readiness Standard</i></b></p> <p style="text-align: right;">Measure Scavenger Hunt . . . . . 411 Assessment . . . . . 434</p>	<b>218</b>	<b>224</b>
<p>(4.6) <b>Geometry and measurement.</b> The student applies mathematical process standards to analyze geometric attributes in order to develop generalizations about their properties. The student is expected to</p> <p>(A) identify points, lines, line segments, rays, angles, and perpendicular and parallel lines; <b><i>Supporting Standard</i></b></p> <p style="text-align: right;">It's Classified Information . . . . . 439 Assessment . . . . . 443</p>	<b>229</b>	<b>234</b>
<p>(B) identify and draw one or more lines of symmetry, if they exist, for a two-dimensional figure; <b><i>Supporting Standard</i></b></p> <p style="text-align: right;">Mirror, Mirror . . . . . 449 Assessment . . . . . 456</p>	<b>240</b>	
<p>(C) apply knowledge of right angles to identify acute, right, and obtuse triangles; <b><i>Supporting Standard</i></b></p> <p style="text-align: right;">Triangle Time . . . . . 462 Assessment . . . . . 464</p>	<b>246</b>	<b>249</b>
<p>(D) classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines or the presence or absence of angles of a specified size. <b><i>Readiness Standard</i></b></p> <p style="text-align: right;">Tubing Down Polygon River . . . . . 467 Assessment . . . . . 479</p>	<b>252</b>	

		TE	SE
(4.7)	<b>Geometry and measurement.</b> The student applies mathematical process standards to solve problems involving angles less than or equal to 180 degrees. The student is expected to		
	(C) determine the approximate measures of angles in degrees to the nearest whole number using a protractor;		
	<i>Readiness Standard</i>		
	Measure That Angle! . . . . .	482	255
	Assessment . . . . .	484	257
	(D) draw an angle with a given measure;		
	<i>Supporting Standard</i>		
	Angle Art . . . . .	490	
	Assessment . . . . .	491	263
	(E) determine the measure of an unknown angle formed by two non-overlapping adjacent angles given one or both angle measures. <i>Supporting Standard</i>		
	Adjacent Angles of Athens . . . . .	497	269
	Assessment . . . . .	500	281
(4.8)	<b>Geometry and measurement.</b> The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to		
	(A) identify relative sizes of measurement units within the customary and metric systems; <i>Supporting Standard</i>		
	Sizing Up . . . . .	505	286
	Assessment . . . . .	508	290
	(B) convert measurements within the same measurement system, customary or metric, from a smaller unit into a larger unit or a larger unit into a smaller unit when given other equivalent measures represented in a table;		
	<i>Supporting Standard</i>		
	Conversion Construction . . . . .	511	
	Assessment . . . . .	521	293
	(C) solve problems that deal with measurements of length, intervals of time, liquid volumes, mass, and money using addition, subtraction, multiplication, or division as appropriate.		
	<i>Readiness Standard</i>		
	A Trip to the Zoo . . . . .	526	298
	Assessment . . . . .	539	302

**Reporting Category 4:**  
**Data Analysis and Personal Financial Literacy**

The student will demonstrate an understanding of how to represent and analyze data and how to describe and apply personal financial concepts.

- (4.9) **Data analysis.** The student applies mathematical process standards to solve problems by collecting, organizing, displaying, and interpreting data. The student is expected to

(A) represent data on a frequency table, dot plot, or stem-and-leaf plot marked with whole numbers and fractions; <b><i>Readiness Standard</i></b>	<b>TE</b>	<b>SE</b>
Data Miners . . . . .	542	305
Assessment . . . . .	546	308
(B) solve one- and two-step problems using data in whole number, decimal, and fraction form in a frequency table, dot plot, or stem-and-leaf plot. <b><i>Supporting Standard</i></b>		
Data Refiners . . . . .	553	
Assessment . . . . .	555	315
(4.10) <b>Personal financial literacy.</b> The student applies mathematical process standards to manage one's financial resources effectively for lifetime financial security. The student is expected to		
(A) distinguish between fixed and variable expenses; <b><i>Supporting Standard</i></b>		
Decisions, Decisions . . . . .	561	
Assessment . . . . .	572	321
(B) calculate profit in a given situation; and <b><i>Supporting Standard</i></b>		
Profit or Loss? Ask the Boss . . . . .	577	
Assessment . . . . .	583	326
(E) describe the basic purpose of financial institutions, including keeping money safe, borrowing money, and lending. <b><i>Supporting Standard</i></b>		
Why Bank? . . . . .	586	
Assessment . . . . .	589	329
Answer Key . . . . .	592	
Student Bubble Answer Sheet . . . . .		332
Bubble Answer Key . . . . .	613	
STAAR Grade 4 Mathematics Reference Materials . . . . .	618	337
KAMICO® Product Information . . . . .	621	

## **Reporting Category 2: Computations and Algebraic Relationships TEKS 4.4D**

*Use strategies and algorithms, including the standard algorithm, to multiply up to a four-digit number by a one-digit number and to multiply a two-digit number by a two-digit number. Strategies may include mental math, partial products, and the commutative, associative, and distributive properties.*

### **ACTIVITY Major League Multiplication Methods**

#### **Materials**

For each student

*Major League Multiplication Methods* standard algorithm—display

*Major League Multiplication Methods* crossed lines—display

*Major League Multiplication Methods* mental math—display

*Major League Multiplication Methods* partial products—display

*Major League Multiplication Methods* commutative, associative, and distributive properties—display

For class display

*Major League Multiplication Methods* standard algorithm activity sheet (student edition)

*Major League Multiplication Methods* crossed lines activity sheet (student edition)

*Major League Multiplication Methods* mental math activity sheet (student edition)

*Major League Multiplication Methods* partial products activity sheet (student edition)

*Major League Multiplication Methods* commutative, associative, and distributive properties activity sheet (student edition)

#### **Standard Algorithm**

Display *Major League Multiplication Methods* standard algorithm. As a class, solve both problems, discussing each step.

Answer Key:  $5,738 \times 7 = 40,166$

$$96 \times 48 = 4,608$$

Students turn to the *Major League Multiplication Methods* standard algorithm activity sheet in their student editions and solve these problems with a partner or individually. After all students have finished, as a class discuss each problem, verifying answers. Discuss any discrepancies.

#### **Crossed Lines**

Display *Major League Multiplication Methods* crossed lines with 4 digit by 1 digit. As a class, work through each step of solving the problem through the use of crossed lines.

Students turn to the *Major League Multiplication Methods* crossed lines activity sheet in their student editions. Students solve the first problem ( $2,063 \times 4$ ) with a partner and the second problem ( $3,462 \times 3$ ) individually.

Display *Major League Multiplication Methods* crossed lines with 2 digits by 2 digits. As a class, work through each step of solving the problem through the use of crossed lines.

Students turn to the *Major League Multiplication Methods* crossed lines with 2 digits by 2 digits activity sheet in their student editions. Students work the first problem ( $26 \times 32$ ) with their partners and the second problem ( $43 \times 17$ ) individually. After students have finished, as a class discuss each problem verifying answers. Discuss any discrepancies.

### **Mental Math**

Display *Major League Multiplication Methods* mental math. As a class, discuss and solve the problems using mental math.

Students turn to the *Major League Multiplication Methods* mental math activity sheet in their student editions. Students work the first 4 problems with their partners and the last 4 problems individually. After students have finished, as a class discuss each problem, verifying answers. Discuss any discrepancies.

### **Partial Products**

Display *Major League Multiplication Methods* partial products. As a class, solve each problem.

Students turn to the *Major League Multiplication Methods* partial products activity sheet in their student editions. Students work the first two problems with their partners and the last two problems individually. After students have finished, as a class discuss each problem, verifying answers. Discuss any discrepancies.

### **Commutative, Associative, and Distributive Property**

Display *Major League Multiplication Methods* commutative property, associative property, and distributive property. As a class, discuss and compare examples of each property.

Students turn to the *Major League Multiplication Methods* commutative property, associative property, and distributive property activity sheet in their student editions. With their partners, students complete the problems using the designated properties. After students have finished, as a class discuss each problem, verifying answers. Discuss any discrepancies.

Regroup

47 hundreds = 4 thousands and 7 hundreds

Total  $4,731$

$83 \times 57 = 4,731$

## Major League Multiplication Methods

### Mental Math Display

Sometimes, you can double one number and take half of the other to make the problem easier.

$840 \times 5$  Think: You can take half of 840 \_\_\_\_\_, and double 5 \_\_\_\_\_.

$$\underline{\quad} \times \underline{\quad} = \underline{\quad}$$

$450 \times 6$  Think: You can double 450 \_\_\_\_\_, and take half of 6 \_\_\_\_\_.

$$\underline{\quad} \times \underline{\quad} = \underline{\quad}$$

$63 \times 11$  There is a shortcut to multiply by 11.

Write the last digit of the first factor \_\_\_\_\_.

Add the digits of the first factor \_\_\_\_\_. Moving to the left of the 3, write the sum \_\_\_\_\_.

To the left of the \_\_\_\_\_, write the digit located in the highest place value \_\_\_\_\_.

The product is \_\_\_\_\_.

$$87 \times 11$$

Write the last digit of the first factor \_\_\_\_\_.

Add the digits of the first factor \_\_\_\_\_. Moving to the left, write the last digit of the sum \_\_\_\_\_, carry the 1 in your head.

Add the 1 to the first digit \_\_\_\_\_ and, still moving to the left, write the sum \_\_\_\_\_.

The product is \_\_\_\_\_.

## Major League Multiplication Methods

### Mental Math Display Answer Key

Sometimes, you can double one number and take half of the other to make the problem easier.

$840 \times 5$  Think: You can take half of 840 (420), and double 5 (10).

$$\underline{420} \times \underline{10} = \underline{4,200}$$

$450 \times 6$  Think: You can double 450 (900), and take half of 6 (3).

$$\underline{900} \times \underline{3} = \underline{2,700}$$

$63 \times 11$  There is a shortcut to multiply by 11.

Write the last digit of the first factor (3).

Add the digits of the first factor (6 + 3). Moving to the left of the 3, write the sum (9).

To the left of the 9, write the digit located in the highest place value (6).

The product is 693.

$87 \times 11$

Write the last digit of the first factor (7).

Add the digits of the first factor (8 + 7). Moving to the left, write the last digit of the sum (5), carry the 1 in your head.

Add the 1 to the first digit (8) and, still moving to the left, write the sum (8 + 1 = 9).

The product is 957.

Add all the numbers to arrive at the product. 3,698

**Major League Multiplication Methods**  
**Commutative, Associative, and Distributive Properties**  
**Display**

The *commutative property* states that when two factors are multiplied, the order has no effect on the product. Therefore, you can sometimes get an easier problem to solve by reversing the order of the factors.

$$\begin{array}{r} 19 \\ \times 67 \\ \hline \end{array}$$

(If one of the factors has a 1 in it, or one of the factors has a repeated digit, it is easier to multiply by putting it second instead of first.)

The *associative property* states that when three whole numbers are multiplied, they can be multiplied in any order.

Example:  $23 \times 6 \times 10$

Whole numbers under the operation of multiplication are *distributive* with respect to addition.

Example:  $4 \times 36$

**Major League Multiplication Methods**  
**Commutative, Associative, and Distributive Properties**  
**Display**  
**answer key**

The *commutative property* states that when two factors are multiplied, the order has no effect on the product. Therefore, you can sometimes get an easier problem to solve by reversing the order of the factors.

$$\begin{array}{r} 19 \\ \times 67 \\ \hline \end{array} \quad \begin{array}{r} 67 \\ \times 19 \\ \hline \end{array} = 1,273$$

(If one of the factors has a 1 in it, or one of the factors has a repeated digit, it is easier to multiply by putting it second instead of first.)

The *associative property* states that when three whole numbers are multiplied, they can be multiplied in any order.

Example:

$\begin{aligned} (23 \times 6) \times 10 &= 138 \times 10 \\ &= 1,380 \end{aligned}$	$\begin{aligned} 23 \times (6 \times 10) &= 23 \times 60 \\ &= 1,380 \end{aligned}$
--	---

Whole numbers under the operation of multiplication are *distributive* with respect to addition.

Example:

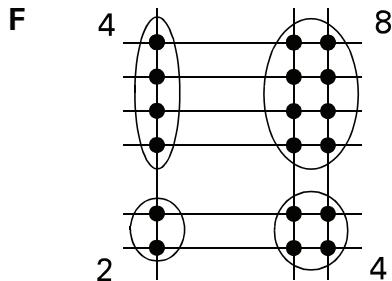

$$\begin{aligned} 4 \times 36 &= 4 \times (30 + 6) \\ &= (4 \times 30) + (4 \times 6) \\ &= 120 + 24 \\ &= 144 \end{aligned}$$

Read each question carefully. For a multiple-choice question, determine the best answer to the question from the four answer choices provided. For a griddable question, determine the best answer to the question. Then fill in the answer on your document.

- 1 In one school district, there are 710 basketball players on high school teams. Each team has the same number of players. Which response could describe the teams of basketball players in this district?

- A 88 teams with 8 players on each team
- B 118 teams with 6 players on each team
- C 142 teams with 5 players on each team
- D 177 teams with 4 players on each team

- 2 A restaurant is divided into 12 sections. Each section has 42 chairs. Which response shows how to find the correct number of chairs in the restaurant?

H

$$\begin{array}{r} 12 \\ \times 42 \\ \hline 24 \\ 48 \\ \hline 72 \end{array}$$

There are 72 chairs.

$$\begin{array}{r} \times \quad 6 \quad \text{think:} \\ \hline 24 \quad 6 \times 4 \text{ ones} \\ 0 \quad 6 \times 0 \text{ tens} \\ 1,800 \quad 6 \times 3 \text{ hundreds} \\ 1,200 \quad 6 \times 2 \text{ thousands} \\ \hline 3,024 \quad \text{boxes} \end{array}$$

D  $2,304$

$$\begin{array}{r} \times \quad 6 \quad \text{think:} \\ \hline 24 \quad 6 \times 4 \text{ ones} \\ 0 \quad 6 \times 0 \text{ tens} \\ 1,800 \quad 6 \times 3 \text{ hundreds} \\ 12,000 \quad 6 \times 2 \text{ thousands} \\ \hline 13,824 \quad \text{boxes} \end{array}$$

- 6 Fourth graders need from 9 to 11 hours of sleep every night to feel well rested and to stay healthy. If there are 3,432 students in all the fourth-grade classes in a large city, and if all these students sleep exactly 9 hours tonight, which response correctly shows the combined number of hours that all the students sleep tonight?

F  $3,432 \times 9 = 3,432$

$$\begin{array}{r}
 \times \quad 9 \\
 \hline
 18 \quad 9 \times 2 \text{ ones} \\
 270 \quad 9 \times 3 \text{ tens} \\
 3,600 \quad 9 \times 4 \text{ hundreds} \\
 + 2,700 \quad 9 \times 3 \text{ thousands} \\
 \hline
 6,588 \quad \text{hours}
 \end{array}$$

G  $3,432 \times 9 = 3,432$

$$\begin{array}{r}
 \times \quad 9 \\
 \hline
 18 \quad 9 \times 2 \text{ ones} \\
 270 \quad 9 \times 3 \text{ tens} \\
 360 \quad 9 \times 4 \text{ hundreds} \\
 + 2,700 \quad 9 \times 3 \text{ thousands} \\
 \hline
 3,348 \quad \text{hours}
 \end{array}$$

H  $3,432 \times 9 = 3,432$

$$\begin{array}{r}
 \times \quad 9 \\
 \hline
 18 \quad 9 \times 2 \\
 27 \quad 9 \times 3 \\
 36 \quad 9 \times 4 \\
 + 27 \quad 9 \times 3 \\
 \hline
 108 \quad \text{hours}
 \end{array}$$

J  $3,432 \times 9 = 3,432$

$$\begin{array}{r}
 \times \quad 9 \\
 \hline
 18 \quad 9 \times 2 \text{ ones} \\
 270 \quad 9 \times 3 \text{ tens} \\
 3,600 \quad 9 \times 4 \text{ hundreds} \\
 + 27,000 \quad 9 \times 3 \text{ thousands} \\
 \hline
 30,888 \quad \text{hours}
 \end{array}$$
